v0.1

# building the delivery layer for cios

from product ideas to reliable fund delivery — why the team needs a second developer now.

TOPIC

team capacity & delivery

AUDIENCE

cios leadership

DECISION

approve one hire

LENGTH

6 sections · ~7 min

01 | CONTEXT | WHY NOW

# cios is entering a new delivery phase.

2 funds aligned

evaluator first product

internal → external phase

01 **green rock** and **chiron** are already aligning on evaluation metrics.

aligned

02 we need to roll out concrete products for funds — beginning with the **evaluator**.

in flight

03 cios is moving from internal building to external delivery.

shift

## NOTE

this is no longer only a product-building effort — it is becoming a client-facing delivery system.

## 02 • DIAGNOSIS • THE BOTTLENECK

# our limitation is delivery bandwidth — not ideas.

01 nikolai has designed multiple product interfaces and solutions.

ready

02 the target operating model is locked in.

ready

03 key technical capacity is split across too many functions.

blocker

## TARGET — PROTOTYPE

**3–5** days

idea to showable

## TARGET — FULL LOOP

**1–2** weeks

validation with a fund

## EVIDENCE

delivery

01 **4 interfaces** waiting for integration.

02 **3 weeks** of delay in testing the fast prototype cycle.

03 core ai / infrastructure slowed by lms + payment + support.

## • DIAGNOSIS

we are not constrained by demand or product ideas — we are constrained by execution capacity.

## 03 | PROPOSAL | FUNCTIONAL SPLIT

# separate three functions currently overloaded into one workflow.

PERSON

discovery

**nikolai**

product discovery with funds

workflow analysis

solution design

demo / feedback / iteration loop

PERSON

core

**nikita**

core infrastructure

architecture

ai / backend

complex technical systems

TO HIRE

delivery

**new hire**

maintenance &amp; reliability

productionization

integration support

fund-facing release support

## PROPOSAL

the team does not need more help — it needs a correct functional split.

## 04 | COMMERCIAL | MONETIZATION

# to charge funds, the system must be reliable and predictable.

funds will not pay for ideas alone — they will pay for the things that make ideas usable.

usable tools

predictable rollout

stable performance

ongoing maintenance

without a dedicated production / reliability layer, monetization stays weaker and slower — pricing power stays low.

**NOTE**

the new hire is part of the commercial model — not just part of the engineering team.

## POSITIONING SHIFT

commercial

a **ideas only** — weak monetization.

today

b **ideas + delivery** — charge-ready.

target

## PRICING POWER

**low**

on ideas alone

## W/ DELIVERY LAYER

**strong**

tools fund teams trust

05 | OUTCOME | OPERATING CADENCE

# a fast product iteration engine across multiple funds.

WITH THIS SETUP, WE CAN

- 01 move nikolai into his highest-value role.
- 02 keep nikita focused on core technical leverage.
- 03 establish a reliable shipping layer for releases.
- 04 run weekly / biweekly validation cycles with funds.
- 05 test products sequentially across 2–3 funds.

## TARGET OPERATING CADENCE

## PROTOTYPE

**3–5** days from 3w

idea to showable prototype

## VALIDATED LOOP

**1–2** weeks new

full validation cycle with a fund

## ● OUTCOME

this hire increases speed, quality, and monetizable throughput at the same time.

# hire one product / implementation engineer — now.

## ROLE FOCUS

|    |                                          |      |
|----|------------------------------------------|------|
| 01 | maintenance and system operability       | ops  |
| 02 | productionization of product interfaces  | ship |
| 03 | integration support                      | ops  |
| 04 | release support for fund-facing products | ship |

## BUSINESS RATIONALE

|   |                             |           |
|---|-----------------------------|-----------|
| a | unlock evaluator rollout    | unblock   |
| b | support green rock + chiron | enable    |
| c | free up nikolai & nikita    | capacity  |
| d | build cios delivery layer   | strategic |

### FINAL NOTE

without this role, growth is limited not by market demand — but by delivery bandwidth.
